CONSTRUCTION PROJECT

Annual Project Closing Report

Statement of Accomplishments

During the fiscal year July 1, 1974 to June 30, 1975, the following tasks were completed:

A total of 222 fish screens located on diversion ditches and canals within the Salmon River drainage were operated and maintained.

A total of two screens were modified by the installation of an electric motor to replace the water wheel resulting in more positive operation and reduced maintenance.

Eight screens were modified to accommodate larger flows in the diversions. Screens were lengthened, widened or raised as required.

A considerable amount of effort was expended on maintaining and improving access roads. Culverts were replaced, bridges repaired, gates and fences repaired, bypass pipes opened or relayed.

The project has included additional rip rapping, reinforcing, and fill of banks to prevent flood damage to the screens. This is an annual activity and has continued at approximately the same level as in previous years.
